Projects

MN Cryonics HR monitor

Github link: [Link](#) (opens in new tab) **Deployed application link:** [Link](#) (opens in new tab)

ProjectDescription: This site will authenticate users, and allow them to link to a fitbit account. When the watch unexpectedly loses a heart rate signal, this server will notify emergency contacts. A member dashboard shows users status and alert status including GPS location.

Github link: [Link](#) (opens in new tab) **Deployed application link:** [Link](#) (opens in new tab)

ProjectDescription: This is the companion app that is installed on the fitbit sense.

Cryonics local group hub

Github link: [Link](#) (opens in new tab) **Deployed application link:** [Link](#) (opens in new tab)

ProjectDescription: This site will enable users to create or join local cryonics groups. Member lists and emergency calldown lists are curated by each individual group for rapid retrieval in case of emergency. Each member can fill out as much as or as little information as they want. Built in React with a MongoDB backend. Site still in development

phasmaphobia-ghost-filter

Github link: [Link](#) (opens in new tab) **Deployed application link:** [Link](#) (opens in new tab)

ProjectDescription: This React mobile friendly web app will allow players of the game phasmaphobia to quickly filter out what clues are needed to identify the ghost they are facing. Simple one click interface to cycle between confirmed, excluded or unknown. My code will then show what clues need to be investigated or which ones can be ignored.

Experience

Freelance Sept 2021 - Present

Developer – Developed life alert style system for Minnesota Cryonics Rapid Response non profit organization.

Hewlett Packard 2008 – Present

Customer support solving any and all printer related problems. Supported some local sites with onsite breakfix, and remotely supported a fleet of 3,000+ printers for a large client. Managed print queues, server uptime and failovers. Administered Pharos badge swipe authentication with the backend records.

Education

UMN Full stack web development bootcamp Sept 2020 24 week 240 hours intensive course.

Harvard CS50 2020

Bachelor of Arts(B.A.) in English

University of Houston — June 2024
